

## Test cases description

### KVStoreMetaDataTest (new for MS3)

Test Case	Description
KVStoreMetaDataTest.testMarshallKVStoreMetaData	<ul style="list-style-type: none"><li>• testing the marshall logic for KVStoreMetaData</li></ul>
KVStoreMetaDataTest.testUnMarshallKVStoreMetaData	<ul style="list-style-type: none"><li>• testing unmarshall logic for KVStoreMetaData for correct input string</li></ul>
KVStoreMetaDataTest.testUnMarshallKVStoreMetaDataThrowsException	<ul style="list-style-type: none"><li>• testing unmarshall logic throws proper exception for incorrect input string</li></ul>

### ServerDataTest (new for MS3)

Test Case	Description
ServerDataTest.testMarshallServerData	<ul style="list-style-type: none"><li>• testing the marshall logic for ServerData</li></ul>
ServerDataTest.testUnMarshallServerData	<ul style="list-style-type: none"><li>• testing unmarshall logic for ServerData for correct input string</li></ul>
ServerDataTest.testUnMarshallServerDataThrowsException	<ul style="list-style-type: none"><li>• testing unmarshall logic throws proper exception for incorrect input string</li></ul>

### KVMarshallerTest

Test Case	Description
KVMarshallerTest.testMarshall	<ul style="list-style-type: none"><li>• testing the marshall logic for general values</li></ul>
KVMarshallerTest.testMarshallSpecialCharacters	<ul style="list-style-type: none"><li>• testing marshall logic when the marshall values has special characters that are part of the message protocol</li></ul>

## KVUnmarshallerTest

KVUnmarshallerTest.testUnmarshall	<ul style="list-style-type: none"><li>• testing the unmarshall logic for general values</li></ul>
KVUnmarshallerTest.testUnmarshallSpecialCharacters1	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has special characters that are part of the message protocol</li></ul>
KVUnmarshallerTest.testUnmarshallSpecialCharacters2	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has special characters that are part of the message protocol</li></ul>
KVUnmarshallerTest.testUnmarshallSpecialCharacters3	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has special characters that are part of the message protocol</li></ul>
KVUnmarshallerTest.testUnmarshallSpecialCharacters4	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has special characters that are part of the message protocol</li></ul>
KVUnmarshallerTest.testUnmarshallSpecialCharacters5	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has special characters that are part of the message protocol</li></ul>
KVUnmarshallerTest.testUnmarshallSpecialCharacters6	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has special characters that are part of the message protocol</li></ul>
KVUnmarshallerTest.testInvalidMessage	<ul style="list-style-type: none"><li>• testing unmarshall logic when message type is wrong</li></ul>
KVUnmarshallerTest.testEmptyMessage	<ul style="list-style-type: none"><li>• testing unmarshall logic when the key value is empty</li></ul>
KVUnmarshallerTest.testMessageWithSpaces	<ul style="list-style-type: none"><li>• testing unmarshall logic when the unmarshall values has spaces</li></ul>

## FifoCacheTest

FifoCacheTest.addToCacheTest	<ul style="list-style-type: none"><li>• test the logic of adding a key value pair to the cache</li></ul>
FifoCacheTest.getFromCacheForExistingKeyTest	<ul style="list-style-type: none"><li>• test the logic when getting the value for an existing key</li></ul>
FifoCacheTest.getFromCacheForNonExistingKeyTest	<ul style="list-style-type: none"><li>• test the logic when trying to get the value for non existing key</li></ul>
FifoCacheTest.addToCacheReplaceTest	<ul style="list-style-type: none"><li>• test the cache replace logic when the cache is full</li></ul>

## LFUCacheTest

LFUCacheTest.addToCacheTest	<ul style="list-style-type: none"><li>• test the logic of adding a key value pair to the cache</li></ul>
LFUCacheTest.getFromCacheForExistingKeyTest	<ul style="list-style-type: none"><li>• test the logic when getting the value for an existing key</li></ul>
LFUCacheTest.getFromCacheForNonExistingKeyTest	<ul style="list-style-type: none"><li>• test the logic when trying to get the value for non existing key</li></ul>
LFUCacheTest.addToCacheReplaceTest	<ul style="list-style-type: none"><li>• test the cache replace logic when the cache is full</li></ul>

## LRUCacheTest

LRUCacheTest.addToCacheTest	<ul style="list-style-type: none"><li>• test the logic of adding a key value pair to the cache</li></ul>
LRUCacheTest.getFromCacheForExistingKeyTest	<ul style="list-style-type: none"><li>• test the logic when getting the value for an existing key</li></ul>
LRUCacheTest.getFromCacheForNonExistingKeyTest	<ul style="list-style-type: none"><li>• test the logic when trying to get the value for non existing key</li></ul>

LRUCacheTest.addToCacheReplaceLogicTest	<ul style="list-style-type: none"> <li>• test the cache replace logic when the cache is full</li> </ul>
---	---

## SimpleKeyValueStoreTest

SimpleKeyValueStoreTest.shouldGetValue	<ul style="list-style-type: none"> <li>• test get value logic from the database for a given key</li> </ul>
SimpleKeyValueStoreTest.shouldGetMultipleValues	<ul style="list-style-type: none"> <li>• test multiple consecutive retrievals for keys works correctly</li> </ul>
SimpleKeyValueStoreTest.shouldReturnCorrectValuesForHasKey	<ul style="list-style-type: none"> <li>• test whether the hasKey() method works properly</li> </ul>
SimpleKeyValueStoreTest.shouldThrowKeyNotFound	<ul style="list-style-type: none"> <li>• test the proper exception is thrown when trying to retrieve non existent key</li> </ul>
SimpleKeyValueStoreTest.shouldWriteValues	<ul style="list-style-type: none"> <li>• test the logic of writing to the database works properly for a given key value pair</li> </ul>
SimpleKeyValueStoreTest.readWrites	<ul style="list-style-type: none"> <li>• test that the written key value pairs can be read after</li> </ul>
SimpleKeyValueStoreTest.readMultipleWrites	<ul style="list-style-type: none"> <li>• test that the written multiple key value pairs can be read after</li> </ul>

## RandomAccessKeyValueStoreTest

RandomAccessKeyValueStoreTest.shouldGetValue	<ul style="list-style-type: none"> <li>• test get value logic from the database for a given key</li> </ul>
RandomAccessKeyValueStoreTest.shouldGetMultipleValues	<ul style="list-style-type: none"> <li>• test multiple consecutive retrievals for keys works correctly</li> </ul>
RandomAccessKeyValueStoreTest.shouldReturnCorrectValuesForHasKey	<ul style="list-style-type: none"> <li>• test whether the hasKey() method works properly</li> </ul>
RandomAccessKeyValueStoreTest.shouldThrowKeyNotFound	<ul style="list-style-type: none"> <li>• test the proper exception is thrown when trying to retrieve non existent key</li> </ul>

RandomAccessKeyValueStoreTest.shouldWriteFile	<ul style="list-style-type: none"> <li>• test the logic of writing to the database works properly for a given key value pair</li> </ul>
RandomAccessKeyValueStoreTest.shouldDeleteValue	<ul style="list-style-type: none"> <li>• test the logic of deleting a key value pair works properly</li> </ul>
RandomAccessKeyValueStoreTest.shouldDeleteValueAndReadOthers	<ul style="list-style-type: none"> <li>• test that when there are multiple key value pairs in the database and when delete one, others can be read without error</li> </ul>
RandomAccessKeyValueStoreTest.shouldUpdateValue	<ul style="list-style-type: none"> <li>• test that the value is updated properly for an existing key</li> </ul>

## Connection

Connections.testConnectionSuccess	<ul style="list-style-type: none"> <li>• test that the connect is success when the host and port are valid</li> </ul>
Connections.testUnknownHost	<ul style="list-style-type: none"> <li>• test that proper exception is thrown when trying to connect to a invalid host</li> </ul>
Connections.testIllegalPort	<ul style="list-style-type: none"> <li>• test that proper exception is thrown when the port is invalid</li> </ul>

## Interactions

Interactions.testPut	<ul style="list-style-type: none"> <li>• test that the put command is working correctly for valid key, value pair</li> </ul>
Interactions.testPutDisconnected	<ul style="list-style-type: none"> <li>• test that put is not success when the client is disconnected and a proper exception is thrown</li> </ul>
Interactions.testUpdate	<ul style="list-style-type: none"> <li>• test that the when put command is issued with an existing key, the existing value in the database is updated</li> </ul>
Interactions.testDelete	<ul style="list-style-type: none"> <li>• test that delete key scenario is working properly</li> </ul>
Interactions.testGet	<ul style="list-style-type: none"> <li>• test that the get command is working correctly for valid key</li> </ul>

Interactions.testGetUnsetValue

- test that the get command returns proper error when the key is not present in the database
